Recognition and Intervention

**Alert: Trigger Concern for
OBH**
Criteria: HR 124
Activate MEWS

Order Set for MEWS with concern for PPH:

- Place peripheral IV
- Bolus 500 cc lactate ringers
- Methergine 0.2 mg IM every 2-4 hours up to 5 doses
- Hemabate 0.25 mg IM every 15 minutes up to 8 doses
- Pitocin 30 units in 500 mL infusion or 10 units IM
- Misoprostol (cytotec) 400-1000 mcg rectal **or** 600 mcg buccal
- Tranexamic acid 1g to be infused over 10 to 20 minutes (infusion >1 mL/minute can cause hypotension). If bleeding persists after 30 minutes, a second one gram dose can be administered
- CBC
- INR, PT, PTT
- Fibrinogen
- Thromboelastogram
- Crossmatch XX units
- Transfuse XX units of XX
- Vitals signs q5 min for XX time

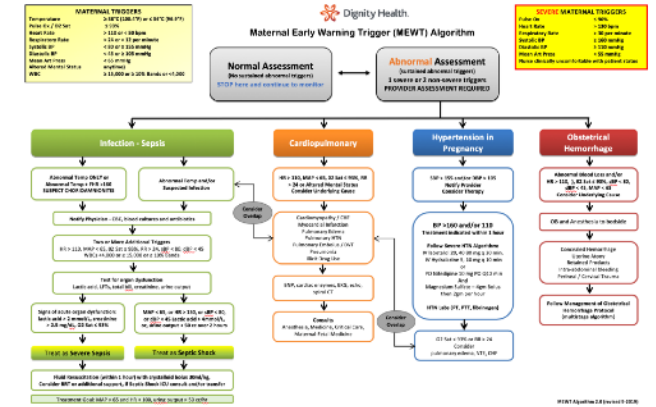

Do Maternal Warning Systems Improve Delivery of Maternal Care?

Do Maternal Warning Systems Improve Delivery of Maternal Care?

Process Measures:

1. Percent of providers that use tool
2. Time to bedside evaluation
3. Percentage that enter designated order set

MEWT Tool Process Assessment

- Reduction in timely treatment of critical BP
- Physician assessment within <1 hour after trigger alert: >80%
- Provider followed evidenced based clinical pathway: >80%
- Deficits: did not have pre and post rates

Clinical care metrics pre vs post MEWT

MEWT Trigger rate 2.3%	Pre MEWT -N (%) categorical variables -N, median hours [IQR] continuous variables	Post MEWT -N (%) categorical variables -N, median hours [IQR] continuous variables	P value ^f
<u>Sepsis</u>			
Time MEWT alert to antibiotics	N=17, 1.87 [1.11-2.63]	N=13, 0.75 [0.31-1.19]	P=0.04
<u>Hypertension</u>			
Care escalation within 60 minutes ^g	N=29, 18 (62.1%)	N=47, 39 (83.0%)	P=0.04
<u>Cardiopulmonary</u>			
Time MEWT alert to diagnostic study or furosemide	N=15, 3.82 [0-8.20]	N=25, 1.50 [0-3.77]	P=0.47
<u>Hemorrhage</u>			
Bleeding to first transfusion	N=96, 3.38 [1.56-17.68]	N=105, 3.07 [0.77-19.75]	P=0.13 ^g
Bleeding to balloon placement or return to operating room	N=38, 1.23 [0.67-3.92]	N=45, 0.77 [0.32-3.38]	P=0.06 ^g
MEWT vital sign abnormality to first transfusion	N=28, 1.56 [0.32-3.95]	N=24, 2 [0.84-12.05]	P=0.30 ^g

IQR= interquartile range

^fp value determined by Chi-square test for categorical values; p value determined by Cox regression log-rank test except as indicated for continuous variables

^gMann-Whitney U test

Maternal Early Warning System: Blood Pressure Time to Resolution

Outcomes following MEWS Implementation

	Pre-MEWS (n= 2291)	Post-MEWS (n=3946)	p value
Composite Adverse Event Rate (%)	4.5	2.2	0.006
Transfusions \geq4 units (%)	1.5	0.3	0.002

Obstetric Adverse Event Rate

Unanticipated return to OR or ICU and Transfusion \geq 4 units

So Do MEWS Work?

So, Do MEWS Work?

✓ **Process Measures:**

- ✓ Percent of provider that use tool
- ✓ Time to bedside evaluation
- ✓ Facilitate designated order set

✓ **Outcome Measures:**

- ✓ Return to normal vital signs
- ✓ Reduction in severe hemorrhage
- ✓ Reduced composite adverse outcomes
- ✓ Reduced SMM

Logistical Issues of MEWS

CommonSpirit 

Will these Only Work in Large Centers?

Location	Del. Vol.	Location	Del. Vol.
MRMC CA	3,000	St. Joes AZ	4924
MSJ CA	2010	St. Joes. WA	4104
Mercy General CA	1260	Harrison WA	1889
French CA	706	Highline WA	838
Sierra Nevada CA	440	St Elizabeth WA	339

Same Assessment Fits All Sizes

Start Now v. No Wait for Your EMR

- Limited Resources: go “old school” i.e. paper
 - “I want to wait for the EMR”
 - Significant “build-out issues”
 - Changes to EMR can take forever
- Some systems have already started or have built system
- Larger Facilities: Cerner, Epic, Pascal Metrics, Perigen, others?

Skipped EMR for Detection but Built Order Sets

Maternal Early Warning Triggers (sustained x 20 min)

Severe (1 trigger): HR >130 RR >30 MAP <55 O2 sat <90 nursing clinically uncomfortable with pt status

Abnormal (2 triggers): T 100.4 or >, 96.9 or < HR >110, <50 RR >24, <12

SBP 160 or >, 80 or < DBP 110 or >, 45 or < MAP <65 FHR >160

Altered Mental Status

Sepsis (suspect significant infection)

Notify MD/request eval

SECTION I : SCREENING CRITERIA

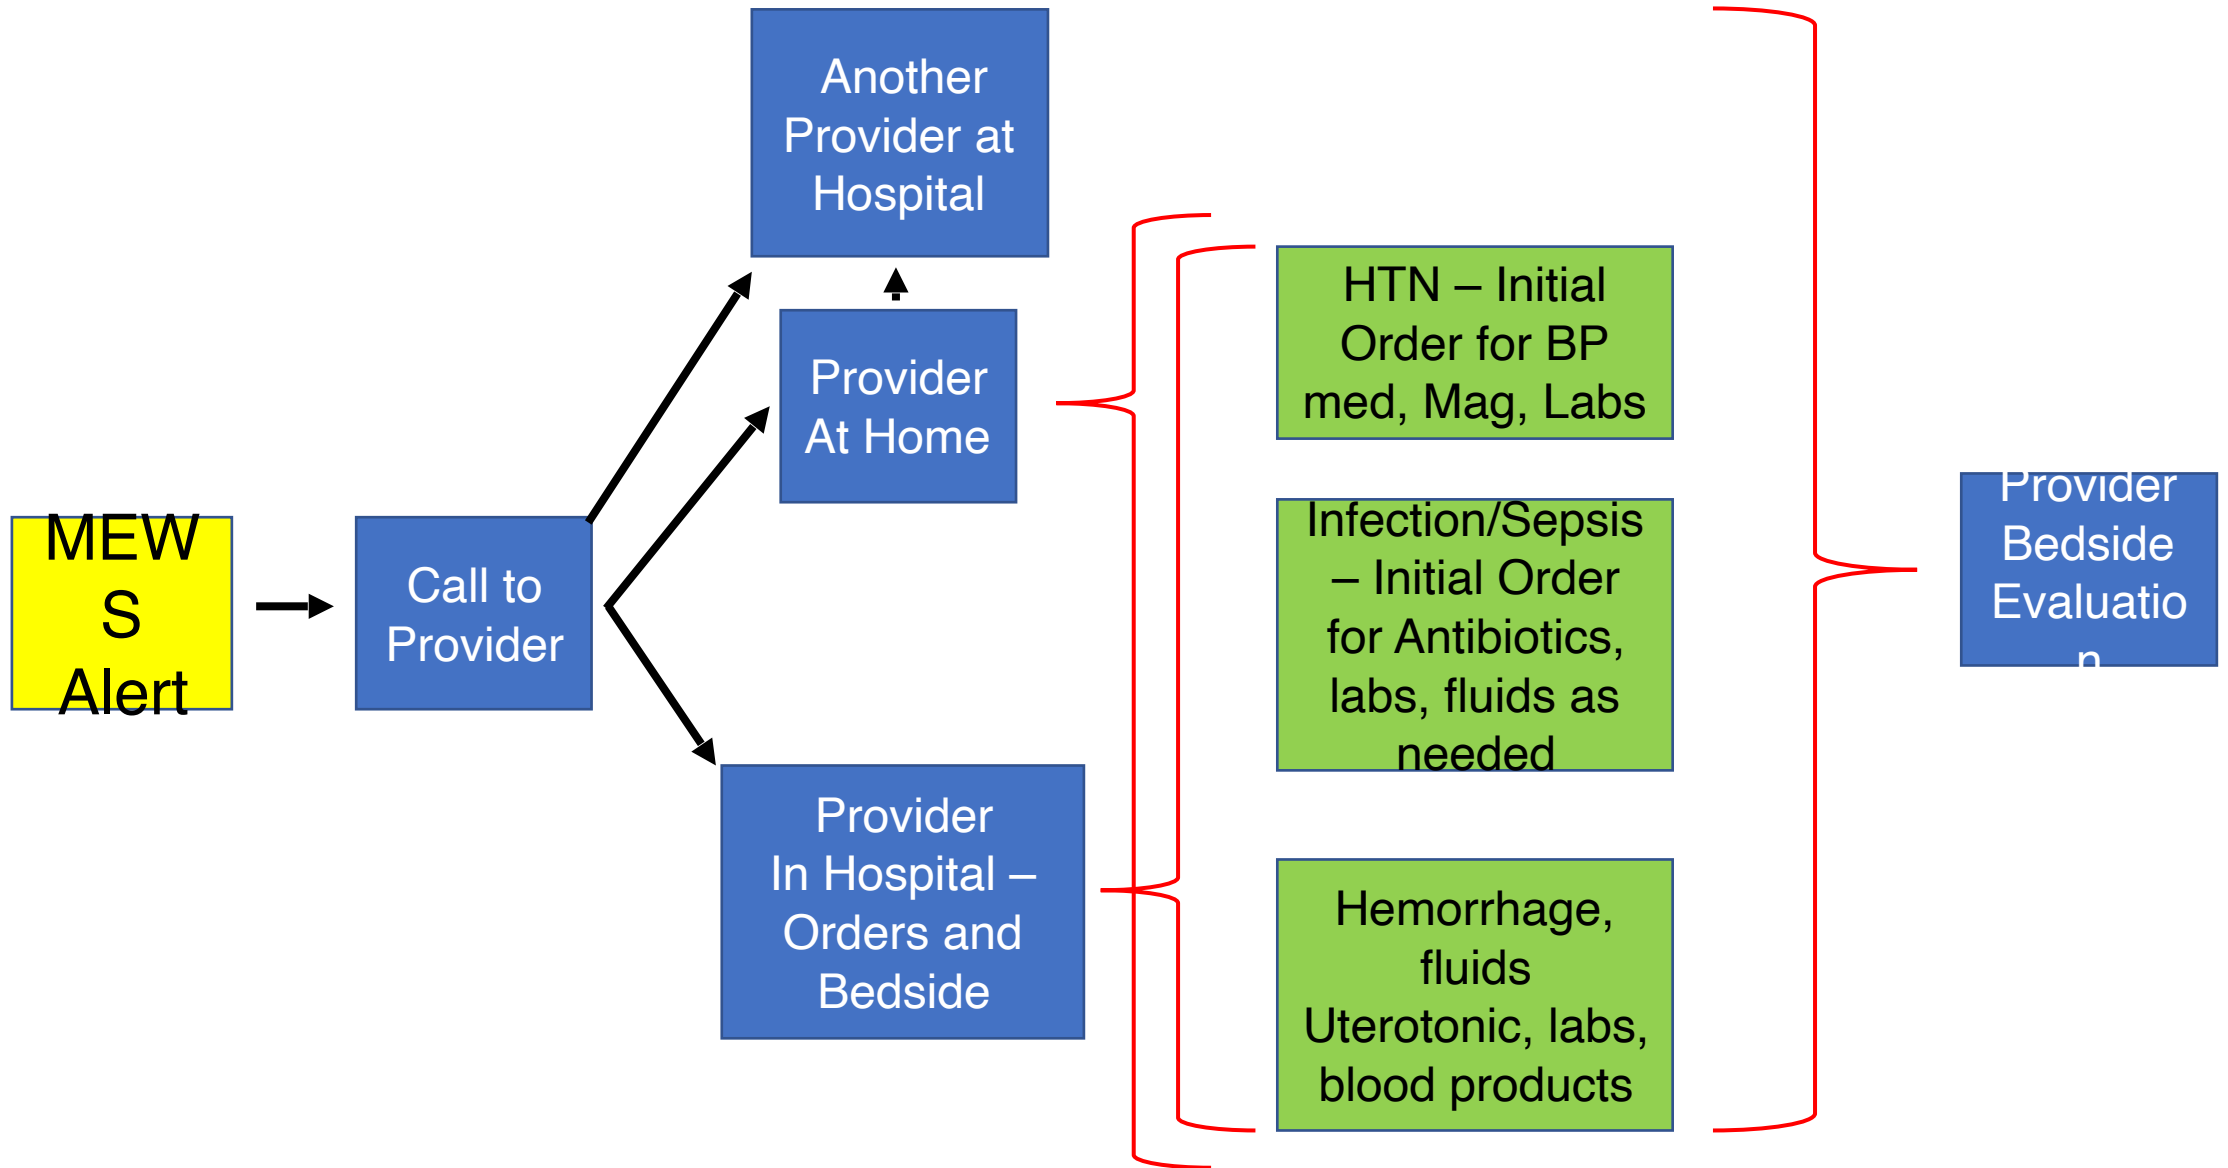

Severe Abnormal Trigger: If any ONE (1) of these are present greater than 20 mins CALL PROVIDER IMMEDIATELY

- Heart Rate greater than 130
- Respiratory Rate greater than 30
- Mean Arterial Pressure (MAP) less than 55
- Oxygen saturation less than 90%
- Nursing is clinically uncomfortable with patient status

Maternal Trigger	Screening Criteria	Check all that apply in the table below ↓					
1. Temperature	Greater than or equal to 38 C/100.4 F OR Less than or equal to 36 C/96.9 F	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Fetal Heart Rate (sepsis path)	Greater than 160 bpm (*baseline, gestational age greater than or equal to 20 weeks)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Maternal Heart Rate *exclude during pushing	Greater than 110 bpm or less than 50	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Respiratory Rate	Greater than 24/min or less than 10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. O2 saturation	Less than or equal to 93%	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6. Blood Pressure	Systolic greater than 155 or less than 80 Diastolic greater than 105 or less than 45	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7. Pain	Sudden onset, increasing, unusual for diagnosis or normal clinical course, noted in new location	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8. Altered Mental Status	Confusion, agitation, combativeness, dizziness, shortness of breath	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Are any two (2) of the above present? If YES repeat assessment within 20 to 30 minutes. If trigger is sustained, CONTACT PROVIDER and consider the following appropriate pathway on the back of this screening tool. Continue with screening every 20 to 30 minutes, as indicated If "NO", STOP HERE till next assessment		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> N	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No

Additional Comments: Which trigger pathway selected _____ Was the triggers pathway followed? Yes No
 Transferred to ICU? Yes No LOS # Days: _____ **Final status of this patient: (summarize below):

Provider Evaluation and Escalation of Care

Threshold of MEWS-T Alerts

- Alert Parameter are similar between the Maternal Early Warning Systems/Tools
- Sustained values:
 - ≥ 2 v. ≥ 2 sustained triggers increased probability for IUC admission for 10.2→61.7
 - Reduction in alert frequency and alarm fatigue*
 - Increase in perceived clinical relevance of alert**

*Hedriana et al. IJOG 2015; 132(3):337-41 38

**Blumenthal et al. AJP 2019;36:1106

Value of Alert and Frequency

Retrospective Assessment*	Sensitivity	Specificity	PPV	NPV	% of Control with + Alert
MEOWS	67.1%	51.2%	46.9%	70.8%	49%
MERC	67.1%	60.2%	52.0%	74.0%	40%
MEWT	40.5%	88.6%	69.6%	69.9%	11%
Prospective Assessment					% of patients with a + Alert
MEWT**					2.9%
MEWT***					2.3%
TCHMB					7%

*Blumenthal et al. AJP 2019;36:1106

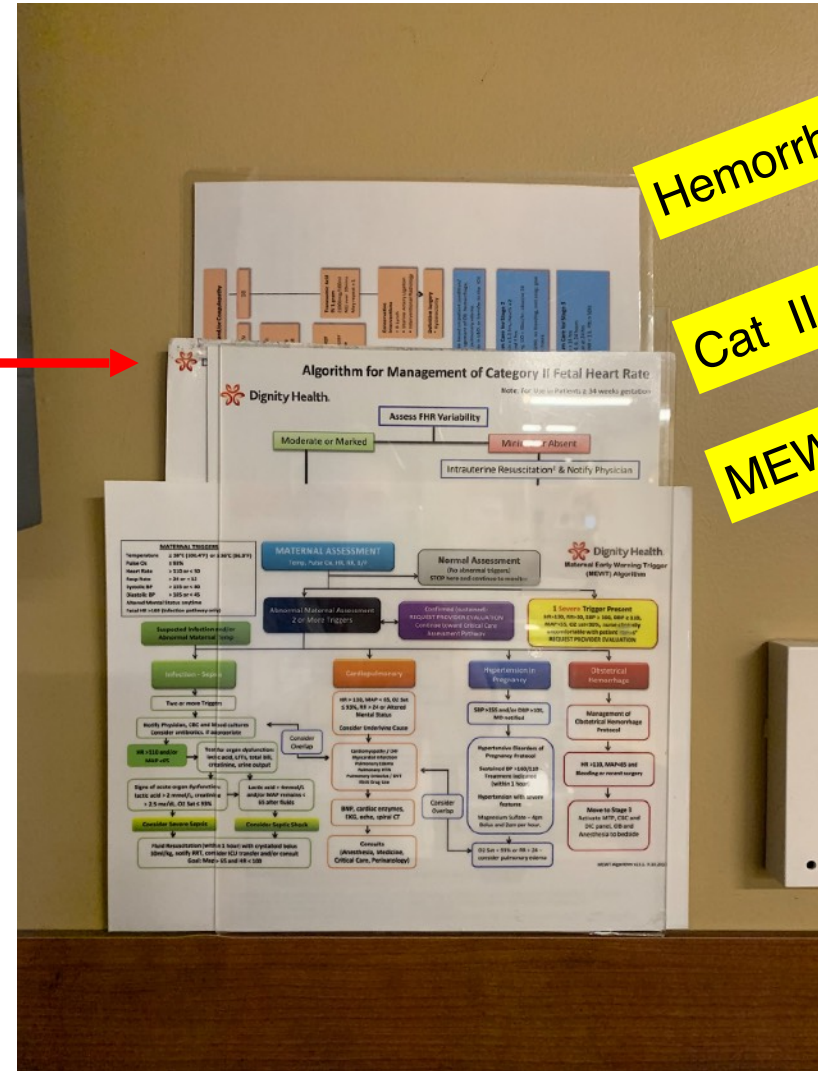

**Shields et al AJOG 2016;527e1-6

***Blumenthal AJOG 2020;s165

Barriers and Limitations

- Perceived value of alert: “the system fired and I don’t think anything is wrong”
- False positive alerts: “every time I get an alert the patient was fine”
- Agreeing on standard responses or order sets
 - BP, Hemorrhage, Sepsis, Cardiovascular
- Difficult in measuring value:
 - low frequency events: sepsis, DVT, cardiovascular cases
 - For systems – process and outcomes assessment
 - For *individual hospitals and providers* – *process measure assessment*
